New Xell 28 th Ans. Aug. 26 24 My Dear Lu! Manchester, M.J. Feb. 14. # 1843. the 4th alt. a few days since, and was not a little gratified of having the pleasure to enrol your name. on my list of correspondents and contributors, - I shall he highly pavoured with the communication of any plants from your segion, particularly the Compositue your suite of Euscutaneas are particularly desirables. you say that you have not earefully examined the Grammear, & typeracear, of your region. - I hope you will not be detered forom collecting such this season. I wish you would take the trouble, to collect and, one, 4 or 5 Specimens of each in good state. You are no doubt aware that the Earnes should be collected when the seeds are somewhat matwed but not ripe enough the shell out. Better to collect the Earices at different stages of maturity and also the ripe seed, I have been making up packages af my larices and have still a goodly number left and I will cheerfully send such as I have to space many of them are thouse and very race. They never mostly eallested in the central part of h. Josh, in the Dicinity of the city of Artica. There are several species by no means common in any part Larer exilis, Demy. C. polymorpha, C. Barrattii Joney. E, livida and others. But it is not north while to trouble you

with a list from onemary of the plants, smees I monmouth lounty in the course of next season which promise - ious to be considerably extensive, Comprising about 60 or 100 Miles of Sea coast and many thousand acres of Dine Barrens, Besides a considerable quantity of excellent lands The range is extensive, appareling a great variety of soils and other peculiarities, which may afford many more race and interesting plants to those already on the list. The task of exploring the country is an ardnows one yet I promise myself no small share of gratification in the undertaking. - I will send you a copy of the list as soon as made out, - I do not expect to collect all the plants that may grow in the landy next season get with the help of friends and what I have collected the theo last Leasons I hape to collect by far the greatest proportion of the Hora of this region. - I wish you would write to me immedi--ately, and tell me to what place in A. york city I san direct a package, which will be convenient for you to eall or send for, and I will embrace The earliest apportunity to send you a parcel; By the lege I presime that your Mirehants deal in new you and that I might send by some of your Merchants If I could find them out in M. Jack on rous arguar -ed with what thouses They trade in that either to me lace of Mr. William Torrey. 90.20. Platt It New York until otherwise ordered.

I have about 110 species of larices and north very much the muchan In hope that you may afford somthing in this many as our addition, I have been perhaps too importunate, in my requesto, but be apriced I feel as willing to give as to accept favoures of this hand If I had counted all the speamers I have communicated to my botanical friends I have no doubt it would amount to many Thousands. & I hope if I have to communicate, many thousands more, Relieve me seery sesfulfully your most bledint serout P.A. Rec Jan 35-1844 Manshesten, 91. J. 22 Dec. 1843. My Dear Su! Safely to Land gesterday - I had several times requested melpengers to call and they invariably told me there was no such spachage at Wiley & Butmamis - I regret that I have not been able to send you a parcel before this time, but during the season of botanizing my leisure hows were, occupied with making collections, and since that time I have, been wasting to have convenient rooms completed to work at my plants more advantageously these, are now finished but not grute dry enough to occupy. I hope you will not be altogether dissteomaged with one as a correspondent, in making you Freturns so tardely - Brefsing engagements in private Sand Spiblic Pensines, as well as the duties of my profes-I from and domestic affairs have clamas on my time swand exertions which are paramount to my botamed Det meth my newly arranged plans I hope to do more even if it should deprive me of some of my sleeping hours. Jour plants were highly geatifying and, nearly all of them are quite new to me, - I must confep that I am not well versed with The Compositue, and every additional plant (which is well authenticated) of that Order I sprize highly. I think you informed me that you had not many Experaceons plants - of these I can supply you fretty liberally at least with such as are found here and in the State of new york particularly of larices -:

I have recently become much interested with the study of Phymehos pora, having discovered a species which is believed to be new by Drs. Torrey, Gray, Darlington, Sartwell, and Mr. Enths, all well versed in Experaceons plants and which I have ventured to name as a small tribute of respect and well deserved merit Rhynchospora Grayin, It will sprakally soon be published in Silliman's Journal. your specimens of Euscota are particularly acceptable I think There are not more than two species here -But I will make Juster examinations to ascertain The fact. The you acquainted with Dr. S. B. Med Rost Master at Augusta Illinois - He is an ald botains and has I believe collected extensively - He has sent me a small parcel of Western plants. Dr. Gray has made another town over The Intsof n. Carolina, or chiefly for the purpose of callecting livening plants; roots & seeds for his Botanic Garden at lambridge and I learn he has been grute suceppful. Dr. Torrez is, this time hard at work, at his, Flore of the State of new york, as State Botomist to The Geological Survey -I must here close this lotter. Jane most Shedent, and huntele servent. GEORGE ENGELMANN PAPERS B.B. Rmiskern.

Mex- at 16th Det- At 16th Manchester 91.7 Oct 46 Dr. Engelman. My Dear Line I sught to have an apology tong ago for nat promptly reyouling your favour sent some thodayears sme The plants though not many med of the most interesting hind, swell preserved & of acceptable Genera & Species some I had not performe soon I began immediately to ful you up a parcel of my best plants but owing To embarrassments and perplexities inerdint to - I was obliged often to be and my favourte pursuit and toil for the necessaries of life - The pariel is till on hand but was thought two meager to foreward after having (believe) promised you all the fine flants of him promy - However Drovidence permothing I hape to send you something This fall or Minter. - Inclosed & sind you a specimen of Schryma proilla of which I have just collected a supply of speinnens in fine order - Last fine I made a botanid trip to the shore of Lake Ontain hopong to obtain some race Northern plants - In part of was one iefsful obtaining a supply of Drawcephulum parvillonum which had not hun oun for the last 8 years - Ceanix brawie, Lacafraga corrody
